

Use the clips to:

A) Connect BUILD modules: Securely link up to 3 modules per clip.

B) Mount BUILD modules to the wall: Professional installation recommended.

Use suitable wall plugs and screws. Recommended: Screw 4.5 x 70 mm for size 6 wall plugs.

STEP 1 Determine the desired location and layout for your BUILD shelving.

STEP 2 Position the clip: Insert one clip into a module and hold it against the wall.
You can add more clips later.

STEP 3 Mark the hole: Use a pencil to mark the middle hole of the clip on the wall.
For maximum stability, use up to 4 screws per clip.

STEP 4 Secure the clip: Remove the module and screw the clip into the marked spot.

STEP 5 Attach the module: Push the BUILD module into one of the clip's tubes.

STEP 6 Push the next module (with additional clip) onto the fixed clip.

Repeat STEPS 2–6 for each additional unit, marking and securing each new clip.

*Note: To avoid visible clips sticking out, break the clip at its designated breaking point. Use pliers for this step.
Safety Warning: Breaking the clip may produce sharp edges. Wear protective gloves and goggles.*
