

The sound of colour

Our acoustic lids and inlay panels are based on the bold shape of our BUILD shelving element and are offered in a vibrant spectrum of colors.

The MOVISI SONIC material involves a special process that knits 60% post-consumer PET fibers (recycled PET bottles) without the need for glue, meaning our products won't degrade or need repairing as easily as some others do. Enjoy a long lifetime of colorful acoustic excellence.

INLAY PANELS

seamlessly integrate into the BUILD elements, requiring no extra hardware. They add vibrant colour to your open shelves, offer branding opportunities in offices, and improve the sound quality in workspaces.

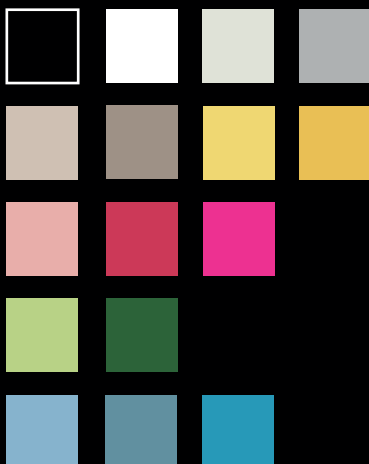

FRONT LIDS and BACK LIDS

come pre-fitted with magnets, allowing them to snap seamlessly onto BUILD elements without the need for any additional hardware. You can also repurpose the lids as seating pads, transforming your BUILD modules into a stylish seating arrangement.

COLOURS:

Thank you ...

for choosing a MOVISI product, and congratulations on your purchase of BUILD, our versatile modular shelving system.

BUILD is crafted from Arpro EPP, an innovative Expanded Polypropylene foam material that enhances your furniture experience for greater flexibility.

BUILD is incredibly light, yet exceptionally strong, making it a breeze to move and rearrange your furnishings as your needs change. In minutes, and without any tools.

When you move it about, BUILD will not scratch even the finest hardwood floors or damage walls if you happen to bump into them.

Importantly, the material is so environmentally friendly that it is actually approved for food contact. It is completely odourless, free from toxins, and 100% recyclable, making it a responsible choice for your home or office.

Cleaning: like water off a duck's back, BUILD fends off dirt, spills and stains of all sorts. Just wipe with a damp cloth. You can even wash your shelves in your sink or shower, as BUILD is entirely waterproof. Avoid abrasive cleaning agents.

COLOURS:

AVOID:

- Climbing or jumping on the product
- Contact with sharp objects
- Placing hot objects on the product
- Overloading
- You can use BUILD outdoors but it is not recommended for continuous exposure to UV light, due to the nature of the polymer it is made from.
- Movisi is not responsible for damage caused by anything or anyone that does not follow the guidelines for use of the product.
